

Employee tracking management system. It uses online database on godaddy.com hosting server for tracking employees. First we have to log in to admin or user part of app. There are three levels of permissions, Super Admin, Admin and User. Depending on it different ways to log in are enabled.

One way is to use web app and second one is to use desktop app, one for employees and second for administrators.

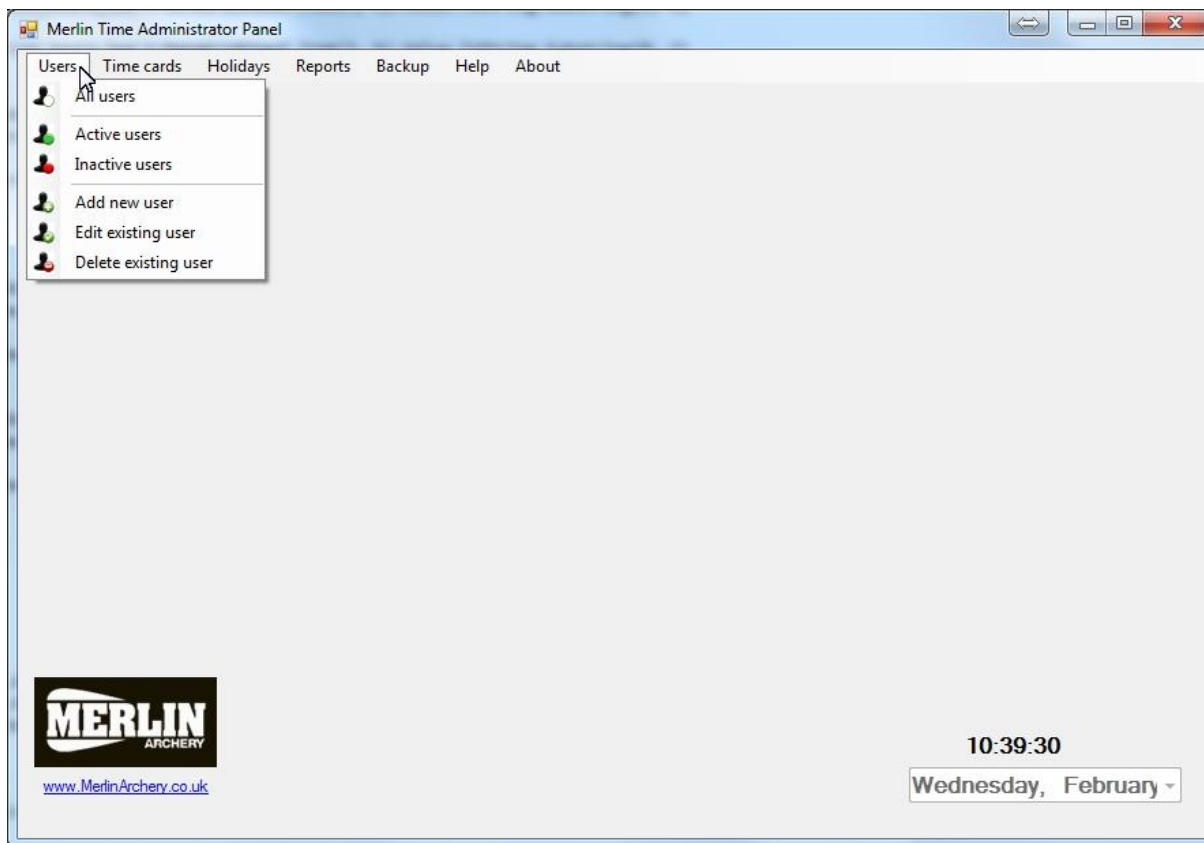

If you are employee, then depending on your status one of two windows will be shown to you.

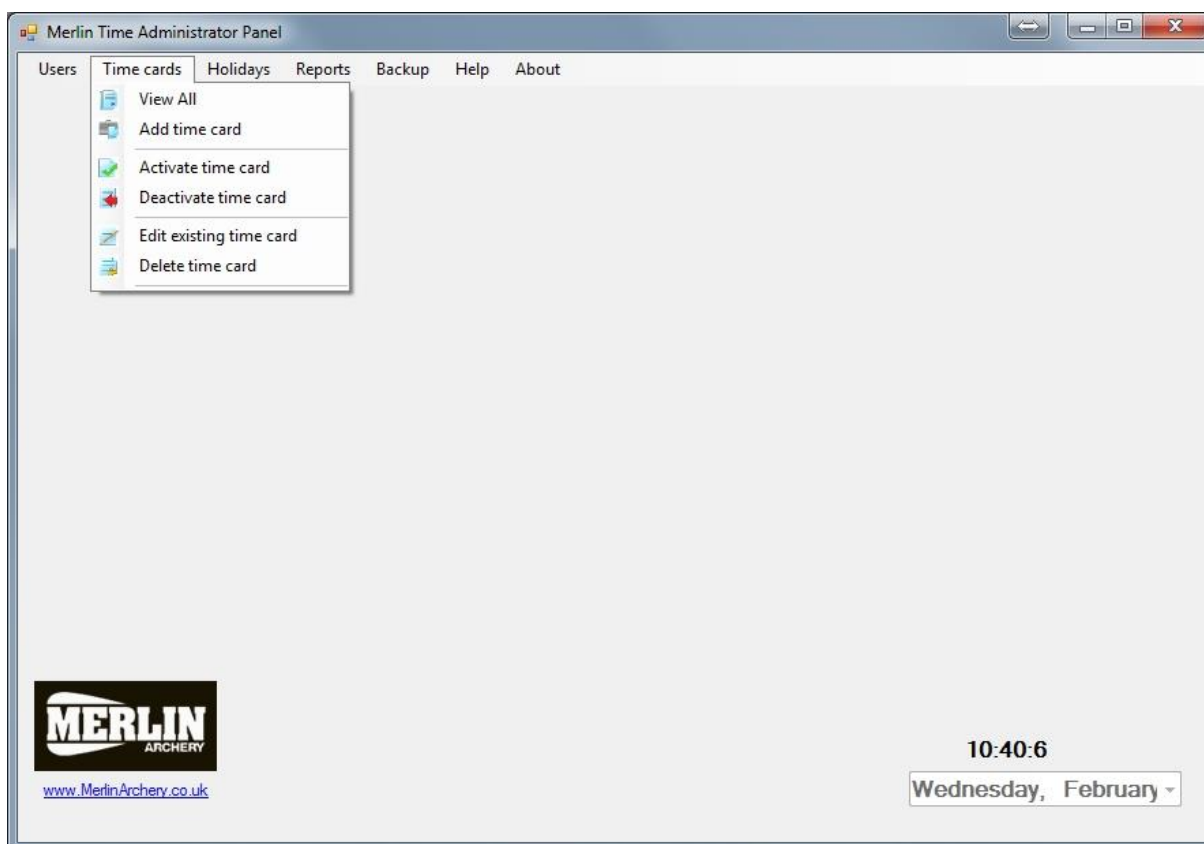

If you are one of administrators then other options will be enabled for you

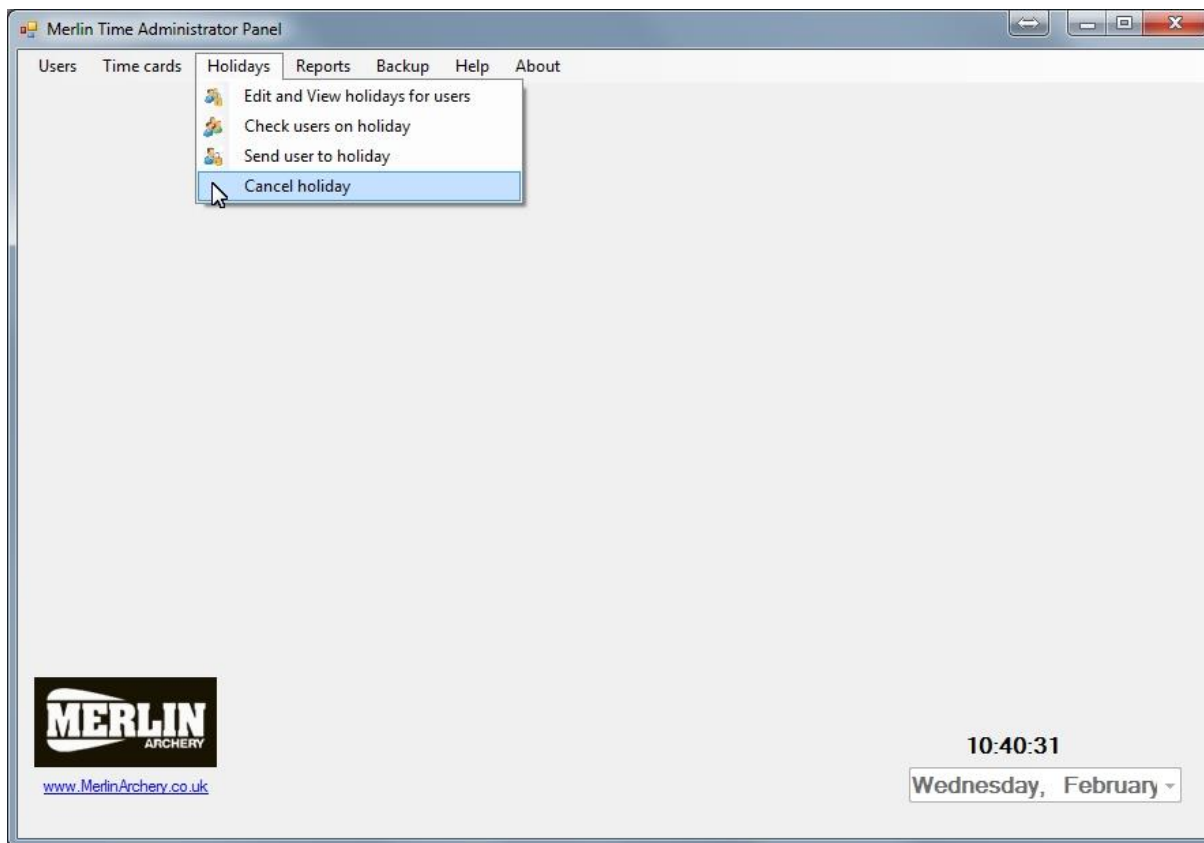

You have options to work with user's data. You can edit, delete, add, check active and inactive users.

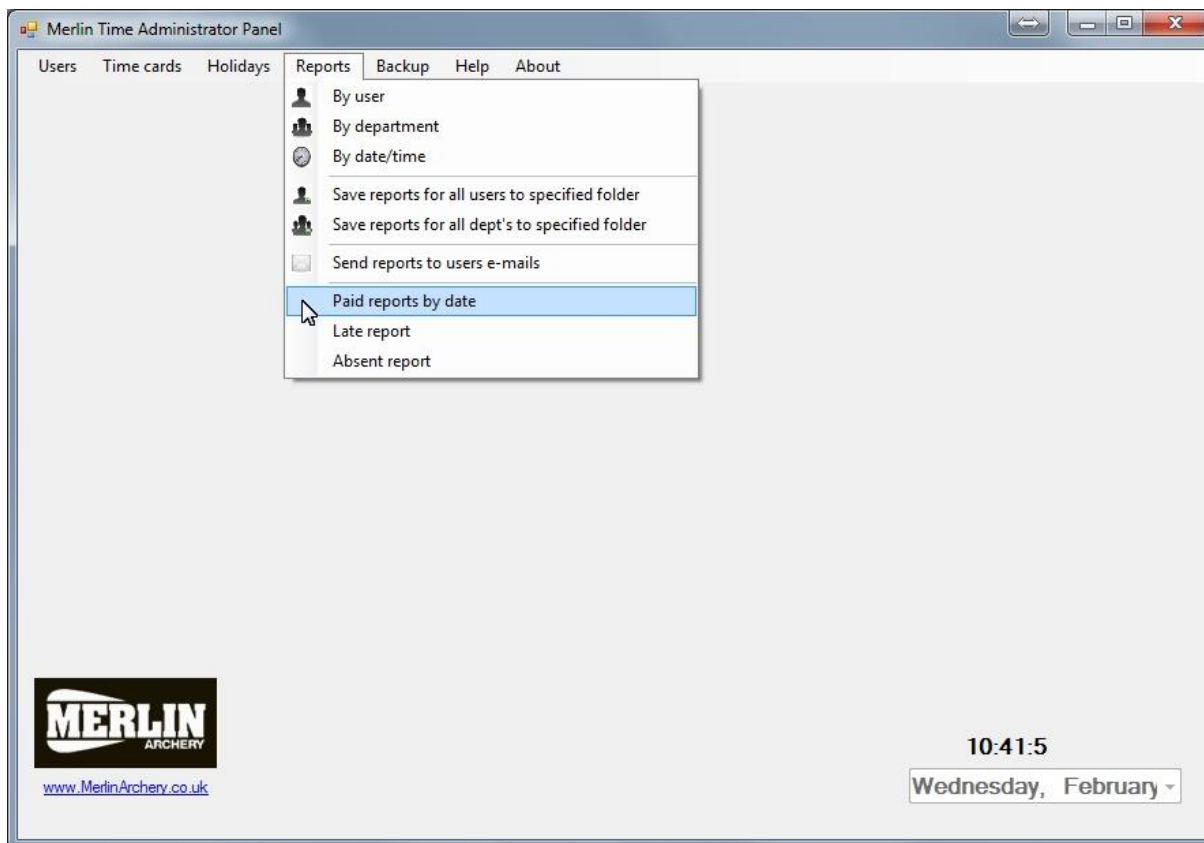

Most of options are placed in Time Card's menu

Holidays are very important part of program.

Reports are what program was made for.

Backup and restore are very usefull options in case of some troubles with your servers.
